Subject: Tonawanda Coke Plant

Hi ! My name is Cynthia Monkelbaan and my family have been residents of the City of Tonawanda located behind Veteran's park since 1984. I have always loved our neighborhood and felt very fortunate at a young age to own a house at all!! I remember the smell in the beginning of our home ownership being outside with my little kids and even to this day when I take a walk outside I can still smell chemicals in the air and also numerous times have wiped black soot from my outdoor furniture. I don't know why I didn't put 2+2 together!! Also I grew up in Kenmore/Town of Tonawanda area.

Our first very tragic event in 1979 was that my 17 yr. old sister, Kathy, died of Rhabdomyosarcoma a terrible rare cancer originating in the bone marrow. It drove my parents crazy trying to figure out how their daughter at this age gets that disease??

Fast forward 30 yrs. later ...to 2009, my dad, Robert, is diagnosed with Large B- Cell Lymphoma also originating in the bone marrow and having lived in Kenmore all his life, no wonder...he is currently in remission after a long, hard chemo regimen.

This past March 2013, my oldest son, Jason, 33 yrs. old was diagnosed with a type of Multiple Myeloma-bone marrow origin called Plasmacytoma (which I see another one of our neighbors has)and he is still battling. I think we've had enough cancer in our family... And we are sandwiched between Tonawanda Coke Plant and Spaulding FibreTime to get to the bottom of this. How much does our family need to suffer??

Also, when thinking about my neighborhood, there has been many residents that have died from various types of cancer.

What can I do as a citizen to make sure this company is held responsible?? Yet the DEC and EPA say they cannot confirm a causal link?? Really???

Thank you.
